Featured Partner: Option Wireless's CloudGate Gateway

Delivering a powerful IoT connectivity solution

Xively has partnered with Option Wireless to bring customers a powerful IoT connected product solution using Option's best-in-class CloudGate gateway.

- Instantly and securely connect, monitor and control legacy Programmable Logic Controllers (PLCs) using Modbus/TCP, Modbus/RTU and other protocols.
- Communicate with local wireless sensors and actuators.
- Deploy or modify device rules from anywhere, without firmware updates or reconfiguration.
- Provides edge processing using the LuvitRED visual editor for fast design and deployment of local processing algorithms, so in the event of a network outage devices continue to function as planned.

Customer Use Case

The CloudGate gateway and Xively CPM platform give Freight Farms a central place to connect and manage the wide variety of sensors used in their connected farms.
